SUBJECT: SI and H Experimentation, 28 April 1953

On Tuesday, 28 April 1953, [redacted] and the writer conducted SI and H experimentation in Room 20, Building 13 with [redacted] and [redacted]. This session was the first for [redacted] who had recently volunteered and was the second session for [redacted] and the third session for [redacted]. In view of this, it was necessary to brief [redacted] on the security problems involved and the writer spent approximately one-half hour discussing the problem with all three subjects.

A Thereafter, standard basic tests were run on [redacted] and [redacted] successfully which gave [redacted] the opportunity for observation. Thereafter the writer conducted standard falling back tests with [redacted] and subsequently the hand rising test. [redacted] responded rapidly to the hand rising test and the writer turned the hand rising test into a slow induction and [redacted] was able to obtain a fairly good trance condition. [redacted] and the writer then ran all subjects on various simple and basic H tests including standard ph in which all subjects participated successfully.

It should be noted for the record that the writer started experimentation with [redacted] at this time in normal movement and successfully had [redacted] open her eyes and created in addition a fairly good amnesia for this act during the H period.

[redacted] in attempting to create movement on [redacted]'s part, discovered that [redacted] had gone into a very deep state and that movement was practically impossible for her. This produced an interesting phenomen and again indicates that [redacted] may possibly be an exceptional subject although it cannot yet be determined. The session concluded with all three subjects being run into a sleep condition using a slow standard induction method.

[redacted] and the writer were very pleased with the results of this session and it appears that [redacted] is going to be a good subject. [redacted] has shown considerable ability and [redacted] on her first attempt attained quite a deep state which is indicative that she too is a good subject. The work concluded at approximately 9:00 PM
